Looking ahead, going beyond expectations Ahead > Beyond

Moving beyond the pump to exceed customers' expectation

The new EBARA In-line close-coupled centrifugal pump has been designed to improve performance and

3E SERIES pumps are versatile, silent, characterized by robust design and ease of maintenance, thanks to the back pull-out design that allows downtime reduction. They are equipped with IE2/IE3 motors as standard, IE4 and IE5 premium efficiency motors available as option for the stub shaft version (3ES).

Realized in two structural shapes in order to satisfy the most wide range of exigencies for the industrial

3E model

Close-coupled construction with the impeller directly splined to the motor shaft

3ES model

Close-coupled construction connection of the pump with standard motor with the impeller splined to the motor by a rigid coupling

Technical data

Flow rate	Up to 216 m ³ /h
Total head	Up to 80,7 m
Max. working pressure	10, 16 bar
Max. temperature of the liquid	-10°C ÷ +120°C
Poles	2
Insulation class	F (temperature rise class B)
Protection degree	IP55
Voltage	Three-phase $3\sim220/380-460V\pm10\%$ (up to 4kW) - 3E, Three-phase $3\sim380-460/660V\pm10\%$ (5,5kW and above) - 3E, Three-phase $3\sim265/460V\pm10\%$ (up to 4kW) - 3ES, Three-phase $3\sim460V\pm10\%$ (5,5kW and above) - 3ES,

The new in-line close-coupled centrifugal pump is characterized by suction and discharge connections in line with the piping.

The design of the extended shaft version is made of an impeller mounted directly on the end of the motor shaft, and a pump casing that bolts directly to the face of the motor Used in handling of liquids in circulation, heating and air conditioning systems in civil and industrial environments.

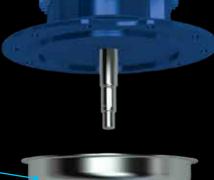

Efficient as never before

IE2 and IE3 motors as standard, IE4 and IE5 motors available as option for 3ES models. Moreover, with 3E-K SERIES, thanks to E-SPD+ frequency converter, you can drastically optimize performance and energy consuption to the system requirements; this is what we call Efficiency.

Motor has never been safer

of materials covering a very large temperature range, to meet your heavy-duty needs. Thanks to AISI 304 (EN 1.4401) stainless steel casing cover as standard for all models, the liquid will never get in contact with the motor.

Preventing damage of seal

We introduced the rotating "Air-Vent" baffle, a new component patented by EBARA, which improve air ventilation and always keep

Reliable over time

Superior hydraulic design impeller available in stainless steel for all models

Long live the pump

The pump body of 3E SERIES is designed for longterm use thanks to his robust structure and the special treatment (CED coating) of the pump surface which prevent rust and corrosion.
